PROFESSIONAL SUMMARY

Full stack developer with 4+ years at Ducen — an Orion Innovation Company, working on **Analance**, a self-serve platform combining business intelligence, data science and data management. I own features end to end: gathering requirements with client stakeholders, building the Angular front end, the .NET / C# APIs behind it, and the SQL underneath. My work spans the customer-facing product, the internal dashboards and tooling delivery teams run on, and telecom data workflows handling datasets in the millions of records. Orion-certified AI-Augmented Engineer and Anthropic-certified on the Claude API, applying LLMs, retrieval-augmented generation and agentic workflows to day-to-day delivery rather than to demos.

TECHNICAL SKILLS

Frontend	Angular, TypeScript, RxJS, NgRx, PrimeNG, JavaScript, HTML / CSS, WCAG accessibility
Backend	C#, .NET / .NET Core, ASP.NET MVC, REST APIs, Entity Framework Core, Microservices, Python, FastAPI
Data	SQL Server, PostgreSQL, MongoDB — schema design, query tuning, reporting and export pipelines
Cloud & DevOps	Azure (Functions, App Service, Document Intelligence, Azure OpenAI), Azure DevOps, CI/CD, Git, Jenkins, Docker
AI Engineering	LLM integration, Claude API, Model Context Protocol (MCP), Retrieval-Augmented Generation, agentic workflows, prompt engineering
Practices	Agile / Scrum, Jira, peer code review, unit testing, accessibility testing, stakeholder requirements

PROFESSIONAL EXPERIENCE

Ducen — an Orion Innovation Company		Chennai, Tamil Nadu • Hybrid • Aug 2022 – Present • 4 yrs 2 mos
Software Engineer		Nov 2025 – Present
- Own product features end to end, from requirement gathering with client stakeholders through design, build, code review and release - Build customer-facing features in Angular (TypeScript, RxJS, NgRx, PrimeNG) backed by .NET / C# REST APIs over SQL Server and PostgreSQL - Develop internal dashboards and engineering tooling used by delivery teams across the account - Handle telecom data workflows — ingestion, transformation and presentation of datasets in the millions of records - Tune front-end rendering and query performance so dashboards stay responsive at production data volumes - Apply AI-augmented development practices as an Orion-certified AI-Augmented Engineer: LLM-assisted code review, test generation and documentation inside the team's delivery workflow - Build WCAG-compliant interfaces, with accessibility testing part of the definition of done - Peer-review teammates' code and ship through Azure DevOps CI/CD pipelines with Git-based branching, in a team of 6–10 engineers		
Associate Software Engineer		Apr 2024 – Nov 2025
- Delivered Angular and .NET features across Analance's reporting and data-management modules - Built reusable UI components with PrimeNG and RxJS-driven state, reducing duplication across screens - Wrote and tuned SQL Server / PostgreSQL queries behind dashboard and export workflows - Worked Agile in Jira — sprint planning, estimation and defect triage through to closure - Contributed to accessibility remediation, bringing screens to WCAG compliance		
SDE Trainee		Oct 2023 – Mar 2024
- Moved from supervised tasks to independent feature delivery across the Angular front end and .NET service layer - Took defect fixes and enhancement tickets in the live product through code review to release - Built working knowledge of the Analance codebase, Git workflow and release process		
SDE Intern		Aug 2022 – Sep 2023
- Joined the Analance team as an intern and was contributing to production code within the first months - Built UI screens in Angular and supporting endpoints in .NET / C# - Picked up the team's Agile process, Jira workflow and Git branching model on live delivery work		
Forus Technologies		Coimbatore, Tamil Nadu • Remote • May 2021
Summer Intern		May 2021
One-month remote internship during undergraduate study, building web pages with HTML, CSS and JavaScript fundamentals		

KEY PROJECTS

Analance — Enterprise Self-Serve Analytics Platform

Ducen / Orion Innovation · 2022 – Present

Orion's unified product bringing business intelligence, data science and data management into a single self-serve platform for enterprise clients. My work has run across the customer-facing product, the internal tooling behind it, and the data layer underneath.

- Build and maintain customer-facing product modules in Angular (TypeScript, RxJS, NgRx, PrimeNG) over .NET / C# REST APIs
- Own the reporting and data-management modules — dashboard rendering, export workflows, and the query layer over SQL Server and PostgreSQL
- Handle telecom data workflows: ingestion, transformation and presentation of datasets in the millions of records
- Built a reusable component library with PrimeNG and RxJS-driven state, cutting duplication across screens
- Tune front-end rendering and query performance so dashboards stay responsive at production data volumes
- Carry WCAG accessibility compliance into the definition of done rather than retrofitting it
- Progressed SDE Intern → SDE Trainee → Associate Software Engineer → Software Engineer on this product

Stack: Angular, TypeScript, RxJS, NgRx, PrimeNG, C#, .NET Core, ASP.NET MVC, SQL Server, PostgreSQL, MongoDB, Azure DevOps

Developer Knowledge Base

Personal · hybrid search + grounded RAG

An internal engineering knowledge platform: developers document a problem once, and everyone else finds it again — by keyword, by exact error message, by paraphrase, or by asking an assistant that answers only from what the team has actually written down. The hard part is not CRUD; it is making retrieval trustworthy enough that people rely on it.

- Hybrid retrieval across keyword, semantic and exact-error search, fused with Reciprocal Rank Fusion over eight filter dimensions
- Error strings normalised into signatures with GUIDs, paths and timestamps stripped, so two people hitting the same fault match even when their messages differ
- Grounded RAG assistant with per-claim provenance — every statement labelled as from the knowledge base, from inference, or not covered
- Refusal as a feature: below a relevance threshold it declines without calling the LLM, shows near-misses, and offers to start an article
- Duplicate detection via embedding similarity plus error-signature matching at draft time; versioning with diff and restore

Stack: C# / .NET, Python, TypeScript, Docker

API Health Monitor

Personal · scheduled probing + incident detection

A monitoring system for HTTP APIs: registers endpoints, probes them on a schedule, records every result, detects incidents from the resulting signal and notifies the people who need to know. Built production-shaped rather than production-sized — the architecture, failure handling and security posture are the point.

- Background worker probes each endpoint on its own interval, recording success, status code, response time and the specific failure mode — timeout, DNS failure, connection reset, unexpected status
- Credentials encrypted at rest and never returned; registration covers headers, auth, expected status codes, timeout, interval and environment
- Dashboard with uptime, average response time, recent failures, and charts for response time, failure rate and status-code distribution

Stack: C# / .NET

AutoForge

Personal · autonomous software engineering

A platform that orchestrates AI agents to design, develop, test and maintain software with minimal human intervention.

- Agent orchestration layer coordinating AI workers across the task lifecycle, from specification through implementation and test
- Agent-facing configuration checked into the repository (AGENTS.md, CLAUDE.md, skill definitions) so every agent works from one operating contract rather than ad-hoc prompts
- FastAPI backend with PostgreSQL persistence, containerised with Docker; React Native client for launching and monitoring runs

Stack: Python, FastAPI, React Native, PostgreSQL, Docker

EDUCATION	CERTIFICATIONS	AWARDS & RECOGNITION
B.E. Electronics and Communication Engineering Sri Eshwar College of Engineering, Coimbatore · 2019 – 2023	AI-Augmented Engineer – Professional Orion Innovation · Jun 2026 Building with the Claude API Anthropic · May 2026 Agentic AI Proficient Developer Microsoft Global Channel Partner Skilling Machine Learning with Python · Anaconda Processing Text with Python <i>19 certifications in total — full list on LinkedIn</i>	Star of the Month Orion Innovation · January 2026 Recognised for contribution to delivery across the Analance product team. Rookie Rockstar Ducen IT · April 2024 Awarded on transition from trainee to Associate Software Engineer.
